PROFESSIONAL SUMMARY

Software engineer with ten years of professional experience, now building AI-backed products end to end. I work daily with the Claude API and agentic developer tooling: designing prompts, defining tools, wiring large language model calls into production systems, and evaluating output quality. Eight live production systems shipped, most as sole developer, spanning multi-tenant SaaS, voice AI, workflow automation and data-heavy web platforms. Every project below is publicly live and can be opened and inspected.

CORE SKILLS

AI and LLM: Anthropic Claude API, OpenAI-compatible APIs, prompt design and iteration, tool and function definitions, agentic workflows, model output evaluation, Claude Code, voice AI integration

Frontend: TypeScript, JavaScript, React, Next.js (App Router), Tailwind CSS, state management, input validation, error and loading states, responsive and accessible interfaces

Backend: Node.js, Next.js route handlers, REST API design, authentication and sessions (NextAuth), role-based access control, request validation, error handling, webhooks

Python: Data processing, API clients, scraping and automation scripts, standalone backend utilities (httpx, Playwright, openpyxl, PyYAML)

Data: PostgreSQL, Supabase, SQL schema design and migrations, PostGIS, SQLite, Sanity CMS, multi-tenant architecture

Automation: n8n workflow automation, webhook pipelines, scheduled jobs, document extraction, data enrichment, third-party API integration

Infrastructure: Vercel, self-hosted Hetzner, Docker, Git, CI/CD pipelines, observability and analytics instrumentation

Quality: Playwright, axe-core, automated testing, code review, debugging across frontend, backend and database, WCAG 2.2 AA, Core Web Vitals

PROFESSIONAL EXPERIENCE

Independent Software Engineer | Lagos, Nigeria (Remote)

2024 – Present

- Build and ship production web platforms end to end for Australian businesses: database schema, backend, API, interface, deployment and the operational tooling around them.
- Built PropInfo, a multi-tenant SaaS platform for buyer's agents. Uses the Claude API to generate pre-purchase property assessments against comparable sales, and computes state-specific stamp duty and lenders mortgage insurance, thirty-year investment projections, rental yield and depreciation.
- Designed the PropInfo data model and access layer: CRM pipeline from enquiry to settlement, live portfolio valuation, and role-based access control across shared multi-agent workspaces.
- Built ProForge, an AI receptionist for trade businesses: voice AI answers calls around the clock, books jobs directly into calendars, sends SMS confirmations, follows up quotes and routes genuine emergencies to the operator. Sole developer across voice, telephony, backend and interface.
- Built iventicks, an event ticketing platform, across 95 server-side API endpoints: authentication and sessions, registration and guest account claiming, role-based admin access, payments, refunds, bulk event cancellation, organiser payouts, analytics, data export, and a live check-in stream with offline sync.

- Wrote standalone Python tooling for data processing and third-party API clients, including a lead pipeline built on httpx and openpyxl, and a headless accessibility scanner on Playwright.
- Delivered client web platforms end to end, including a six-language law firm site and a CMS-driven sponsorship platform where the client edits all content without a developer.
- Engineered a six-scene scroll-scrubbed film homepage with frame-locked scene transitions, separate mobile encodes and server-rendered markup, so all content is present before JavaScript executes.

Software Engineer | Seamate Maritime Integrated Services Limited, Lagos, Nigeria

2021 – 2026

- Design, development and ongoing maintenance of the company web application.
- Conducted code reviews, diagnosed and resolved defects, and improved application stability.
- Developed features in collaboration with company executives and provided direct technical support to end users.

Software Engineer | Efficacy Technology Limited, Kaduna, Nigeria

2016 – 2021

- Built and maintained websites for the company and its clients, including a school website.
- Provided technical research and consultation to support client projects.

SELECTED PROJECTS (ALL PUBLICLY LIVE)

PropInfo propinfo.com.au – Multi-tenant SaaS for Australian buyer's agents. Claude API property assessments, financial modelling, CRM, RBAC. Next.js, TypeScript, Supabase.

ProForge proforge.com.au – AI receptionist for trade businesses. Voice AI, telephony, calendar booking, SMS. Next.js, Supabase, n8n.

iventicks eventticket-psi.vercel.app – Event ticketing platform. Payments, fraud detection, refunds, payouts, live check-in, PWA.

Strategic Buys strategicbuys.com.au – Property advisory site built as a six-scene scroll-scrubbed film, server-rendered.

Asprey Lawyers aspreylawyers.com – Melbourne law firm site in six languages. Next.js 15, React 19, Tailwind v4.

Nikunj nikunj.com.au – Sponsorship platform for a racing driver. Sanity CMS, Supabase, GA4.

NVRGVP nvrgrp.org – Content-led site with country-resolved provider logic, structured for search.

ChargeCore – Charge point management for off-grid solar EV charging on a CitrineOS fork with OCPP. Metering, session billing, tariff logic.

access-audit – Headless WCAG 2.2 AA scanner on Playwright and axe-core. Dated, hash-verified evidence records; fingerprints overlay vendors by script signature.

EDUCATION

BSc, Computer Science Education | Enugu State University of Science and Technology, Enugu, Nigeria

2011 – 2014

National Diploma, Telecommunication Technology | Innovation Institute of Technology, Kaduna, Nigeria

2008 – 2010

CERTIFICATIONS AND LANGUAGES

Python (Udemy, 60 Days) | Intermediate Python (Codecademy)

English: full professional proficiency
